

**MUNHUMUTAPA SCHOOL OF COMMERCE
DEPARTMENT OF BANKING AND FINANCE
SUPPLEMENTARY EXAMINATION**

BACHELOR OF COMMERCE	PART 4 SEMESTER 2
COURSE	FINANCIAL ENGINEERING
CODE	HBF427
DATE	2025
DURATION	3 HOURS

INSTRUCTION TO CANDIDATES

- 1. THE PAPER COMPRISES 5 QUESTIONS.**
- 2. YOU ARE REQUIRED TO ANSWER QUESTION 1 AND ANY OTHER THREE QUESTIONS.**
- 3. BEGIN THE ANSWER TO EACH QUESTION ON A FRESH PAGE OF THE ANSWER BOOKLET.**
- 4. FINANCIAL AND NON-PROGRAMMABLE SCIENTIFIC CALCULATORS ARE ALLOWED IN THE EXAMINATION.**
- 5. CANDIDATES WILL OBTAIN CREDIT FOR SHOWING ALL WORKINGS.**
- 6. THE STANDARD NORMAL DISTRIBUTION TABLE IS ON THE LAST PAGE.**

QUESTION 1**[40 MARKS]****Compulsory**

1.1 Define the term risk-neutral probability as used in Financial Engineering. [5 Marks]

1.2 Given the following inequality in the Forward market, outline the investment hedging strategy you would implement to enjoy a riskless profit. [7 Marks]

$$F(0,T) < S(0)e^{rT}$$

1.3 Under what circumstances would you say that a call option/put option is:

1.3.1 In the money? [4 Marks]

1.3.2 At the money? [4 Marks]

1.3.3 Out of the money? [4 Marks]

1.3 The stock price six months from expiration of an option is $S(0) = \$42$, the exercise price (X) = \$40, the risk free rate (r) = 10% per annum, and the volatility is 20% per annum. Calculate the price of:

1.3.1 Call Option [8 Marks]

1.3.2 Put Option [8 Marks]

QUESTION 2**[20 MARKS]**

2.1 Suppose that stock prices follow a binomial tree, the possible values of $S(2)$ being \$121, \$110 and \$100. Find u and d when:

2.1.1 $S(0) = 100$ dollars. [5 Marks]

2.1.2 $S(0) = 104$ dollars. [5 Marks]

2.2 Explain the following three assumptions used in financial engineering:

i. Short-selling

ii. Solvency

iii. Divisibility

iv. Marking-to-market

v. Randomness [10 Marks]

QUESTION 3**[20 MARKS]**

3.1 Suppose that stock prices follow a binomial tree, the possible values of $S(2)$ being \$121, \$110 and \$100. Find u and d when $S(0) = 100$ dollars. Do the same when $S(0) = 104$ dollars. [10 Marks]

- 3.2 A Suppose that the value of a stock exchange index is 13,800, the futures price for delivery in 9 months is 14,300 index points, and the interest rate is 8%. Find the dividend yield. [10 Marks]

QUESTION 4 [20 MARKS]

- 4.1 Suppose that $A(0) = 100$ and $A(1) = 105$ dollars, the present price of pound sterling is $S(0) = 1.6$ dollars, and the forward price is $F = 1.50$ dollars to a pound with delivery date $t = 1$. How much should a sterling bond cost today if it promises to pay £100 at time 1? [12 Marks]
- 4.2 Find the stock price on the exercise date for a European put option with strike price \$46 and exercise date in six months to produce a profit of \$6 if the option is bought for \$6.50, financed by a loan at 13% compounded continuously. [8 Marks]

QUESTION 5 [20 MARKS]

- 5.1 Let $A(0) = 100$ and $A(1) = 110$ dollars, $S(0) = 90$ dollars and

$$S(1) = \begin{cases} 100 & \text{with probability } 0.6, \\ 70 & \text{with probability } 0.4 \end{cases}$$

Assuming you have \$50, 000 to invest in a portfolio. You decide to buy x shares and y bonds in the ratio 6:4 respectively. Compute:

- 5.1.1 The number shares and bonds you would invest in. [4 Marks]
- 5.1.2 The portfolio expected return and standard deviation. [6 Marks]
- 5.1.3 Portfolio coefficient of variation. [4 Marks]
- 5.2 Comment on the level of risk of the portfolio in 5.1. [6 Marks]

END OF EXAMINATION

Standard Normal Distribution Table
